

The Largest Jungle Water Park in Asia Gears Up with DivioTec

Mission

With over 19 new water slide attractions for all ages, VanaNava Water Park offers the largest jungle water theme park in Asia. This amazing park was established on December 1st 2014 and is situated in a beautiful and peaceful beach resort town 199 Km Southwest of Bangkok, Thailand. In order to ensure smooth operation of the water park and prevent incidents, the organizer wanted to set up a reliable IP-based video surveillance system that would deliver high-quality video images.

Solution

The organizer of VanaNava Water Park selected 2 models of network cameras from DivioTec to meet the requirements for high image quality and reliability of the surveillance system: <u>NBR222P</u> and <u>NBR224P</u>. <u>NBR222P</u> is quite a compact design and is ideal for applications inside shops, ticket office, etc. The <u>Extreme WDR with multi</u> <u>shutter enhancement</u> is the most crucial feature because there is usually high contrast of light indoors and outdoors, especially during sunset.

In outdoor areas with strong sunlight most of the day, thanks to the advanced <u>P-iris</u> function, <u>NBR224P</u> can still capture sharp and clear images by avoiding blurring caused when the iris opening becomes too small. <u>P-iris</u> also ensures superior depth of field, which is important for video monitoring of broad areas: objects at different distances from the camera are all in focus. What's more, <u>NBR224P</u> is <u>IP66</u> certified, so the camera can be well protected against water immersion and dust in the water park.

At the front end, DivioTec helps the water park acquire images with the highest quality, while at the back end, the well-known <u>Milestone Systems</u> offers stable and remarkable network video recording system to ensure the efficient video surveillance.
